

SPECIFICATION

Please replace the paragraph beginning at page 4, line 13 with the following:

In an embodiment, the support 201 might include motors 234, e.g., step motors, coupled to the base 227 and the platform 219 to automatically move the projector 203 vertically and horizontally. The step motors 234 might be actuated using a variety of well-known actuation devices, e.g., buttons 233. The projector's electronics can read the motor steps (in the case of using step motors) to discern the rotation angle and to, ultimately, more accurately semi automatically correct for keystone distortion.
